

Recipe project

Now, we're going to make our Recipe Web page look a lot better using the CSS. Style your website(recipe project) using an external css file.

Example:

Main header formed by:

1. Project title, centered
2. Horizontal menu for medium or large views.
3. The menu will be pinned to the top of the view so that it will always be visible.

Different background or image color for each recipe

Highlights the top options menu with transformations, transitions, or both

Add styles to the image

The ingredient list will be a table. Add styles to the table

Use pseudoelements to decorate the recipe names.

The horizontal menu will be inside a heading tag. The header tag will have rounded corners and shadows.

Add shadows to recipe titles

Make an animation for your website: a ball appears bouncing off the side, a spinning cube, or whatever else you can imagine.

Add a footer to your website where your name, group will appear in the left margin. Course and module name will appear in the right margin.

Use flexbox, at least, to layout the header and footer.

The HTML code will be semantic
