# Activities

## 1. Activity

To develop a simple Web application that will allow you to browse different recipes.

We want to have the following components:

A large title for the app, something like "My Favorite Recipes", or whatever you'd like to call it.

A description of a recipe, just some plain text explaining what the recipe is and any other pertinent information.

A set of steps to follow, numbered in order.

Please start with this "empty page"

```
<!DOCTYPE html>
<html lang="en">

<head>
 <meta charset="UTF-8">
<title>My favorite Recipes</title>
</head>
   <body>

   </body>
</html>
```

... and write the correct markup in order to get this result:

# My Favorite Recipes

- Recipe 1

## Recipe 1

This is going to be my favorite recipe.

List of Ingredients:

- Ingredient 1
- Ingredient 2
- Ingredient 3

Steps:

1. Step 1
2. Step 2

Finally, check the web application with W3C validator.

2. **Activity**

Pick 5 Web sites and do a "View Source" on each of them by right clicking on the page and selecting "view source" from the context menu:

- How many are using HTML5?
  (*Hint*: if you have trouble finding sites that don't use HTML5, try looking at older sites)
- How many have proper `<body>` and `<html>` close tags?
